5th Masterclass in Transarterial Chemo Embolization (TACE)

 **22 – 23 SEPTEMBER 2023**

 **Conference Room, Ground Floor, North Tower,
Subang Jaya Medical Centre (SJMC)**

Welcome Message From The Course Director

I am thrilled to extend to you a warm invitation to attend the 5th Masterclass in Transarterial Chemo Embolization (TACE), scheduled to take place from 22 - 23 September 2023 at Subang Jaya Medical Centre, Selangor, Malaysia. It is with great anticipation and excitement that we embark on this 5th and possibly final masterclass of our interventional radiology TACE series.

Our 5th masterclass promises to be an extraordinary event, bringing together leading minds in the field of interventional radiology and oncology. With a focus on the "New Landscape in Transarterial Chemosaturation, TACE & Combination Therapy in Liver Malignancies," we have curated a high-level programme that delves into the latest innovations, technical advancements, and treatment strategies.

For the two days, we have meticulously designed a Scientific Programme that encompasses didactic lectures by renowned speakers, riveting live case demonstrations, thought-provoking complex case discussions, and enlightening presentations. Moreover, we are dedicated to offering various technical training sessions that will empower each of you to transcend your skills and knowledge to the next generations of practitioners.

I extend my heartfelt gratitude to the distinguished international and local faculties who have graciously extended their support to this masterclass. Their expertise and insights will undoubtedly enrich our collective understanding and pave the way for groundbreaking advancements in the realm of transarterial therapies.

As we explore key topics such as "DEB TACE beyond Precision V and DEBIRI," "Transarterial Chemosaturation: Technical Tricks in Achieving Best Outcome," "Angio-CT: Angiographic Google Maps, CT Microangiography and Seeing The Unseen," "Modern Pathology, IHC, Next Generation Sequencing and PD-L1: What IRs Should Know?" and many more, I am confident that each session will be a stepping stone toward expanding our horizons.

One particularly intriguing session will delve into the "Mixing Technique in Lipiodol TACE: Water-in-Oil vs Oil-in-Water Efficacy of Micromagic Glass Membrane Emulsification Device in Outcome Optimization." This promises to offer novel insights into optimizing outcomes, bridging the gap between theory and practical application.

Our overarching objective for this masterclass is to foster an environment of academic excellence and collaboration. Through this workshop, we aim to promote the latest developments and treatment strategies in interventional radiology and oncology. It is our aspiration to nurture and train young interventional radiologists in the realm of transarterial therapies for liver and colorectal malignancies and metastases. We firmly believe that by enhancing the skills and competency of our young colleagues, we contribute to elevating the standard of care and reshaping the landscape of interventional oncology. For this reason, I am deeply appreciative and grateful for the support from our collaborative partner, MYSIR as well as various sponsors.

I look forward to welcoming each of you to this transformative masterclass. Together, let us explore new frontiers, challenge existing paradigms, and collectively contribute to the growth and advancement of Interventional Oncology, both locally and regionally.

With warm regards,

Dr. Alex Tang
